Helping You Keep Your Eye On The Ball

eOperandi®

Quality Management System for
Operational Processes, Forms and Attachments

Effective Centralisation & Distribution of Knowledge

Key Features

- Ability to illustrate Corporate QMS "On A Page"
- Several ways of accessing processes, forms or attachments
- Ensures effective Induction process through favourites
- Audit trail ensures all changes recorded
- Version control ensures there is only one
- Simple interfaces to give quick access to corporate knowledge
- Computer based training ensures all questions covered
- Flexible to meet your corporate needs
- Re-branding of logo and colours minutes versus days
- Effective & extensive reporting

Benefits - Why should you consider this?

This Quality Process Management System enables the administrators to manage the quality process knowledge and develop the structure in a flexible way. Rich reporting enables the administrator to have an overall view of the current status of the system at any time, including individual aspects in detail.

Ease of Use - For universal adoption by all employees a simple and straightforward 'point and click' user interface is developed. Comprehensive in built help function allows employees to use the system with minimal training

Process Control & Management - This offers a full audit trail detailing any changes to a process. Review dates can be set and automatic alerts will be sent to administrators as and when action is required

Extensive Search Capability - This incorporates a simple to use yet highly effective 'google like' search mechanism allowing users to navigate to relevant processes with ease.

Reporting - Allows the administrator to regularly monitor the usage volume or number of times a specific process has been accessed

Workflow Management - Its efficient workflow management function produces automated alerts to administrators and 'process owners' when actions need to be taken.

Return on Investment - eOperandi® provides substantial return on investment! Land Securities Group, who adopted eOperandi® seven years ago, were subsequently able to achieve a reduction of the cost of audit (carried out by LRQA) from £2.7 million to just £30k per annum.

What our client says about eOperandi

"eOperandi has now been deployed across critical processes within the club such as Ticket Office, Finance and the IT Group for example. We are now building a library of best practices that we will be able to leverage when we build our recovery plans for the business in eSecurus at a later date."

- KEN WEBSTER - ICT MANAGER, LIVERPOOL FOOTBALL CLUB
